

WHITEPAPER

Live For Ads

Ad-to-Earn Telegram Mini App

Version 2.0 • Updated Draft

LFA

OVERVIEW

1. Abstract

Live For Ads (LFA) is a Telegram Mini App built around a simple idea: users check in daily, watch ads, complete light tasks, and refer friends to earn points. At the end of every two-month “season,” a share of real advertising revenue is pooled and distributed to the community based on each user's point allocation. The model is transparent, manually verified, and designed to reward genuine, active participation rather than automated or fraudulent activity.

This v2.0 update introduces a structured daily check-in streak, a dedicated Ads tab with sponsor slots, an expanded admin-managed task system, a public Leaderboard, refined referral mechanics, and live cross-tab data sync — all detailed in the sections below.

OVERVIEW

2. Core Pages

The app runs entirely inside Telegram as a Mini App, requiring no separate download or account creation beyond a user's existing Telegram identity. Revenue is generated through partnered rewarded-ad networks, and a portion of that revenue is shared back with the community that generates it.

Page	What it does
Home	Daily check-in streak box, plus the daily task list below it.
Ads	4–8 sponsored ad slots, each worth points, with per-company view stats.
Leaderboard	Top 100 ranked by points, with a live top-3 podium.
Referral	Personal referral link, referred users list, and eligibility tracker.
LFA	Displays this public website directly inside the Mini App.
Profile	Avatar, stats (7-day / 30-day / all-time), and the withdrawal form.

An internal Admin Panel gives the team full visibility into user points, referrals, task configuration, and withdrawal approvals.

ENGAGEMENT

3. Daily Check-in & Streak

The Home page features a dedicated check-in box that runs on a weekly cycle, Monday through Sunday. Checking in is a single tap — the button claims that day's points instantly.

Rule	Detail
Cycle	Monday to Sunday, tracked as a running streak count

Rule	Detail
First check-in	10 points
Each following day	+5 points over the previous day (10, 15, 20, 25...)
Missed a day	Streak breaks and restarts at 10 points on the next check-in
Claim	One tap on the check-in button; claimed instantly
Reset	00:00 UTC (6:00 AM Bangladesh time), daily

Why it matters

The streak rewards consistency rather than one-off activity — and resetting to 10 points after a missed day keeps the incentive to check in every single day, not just occasionally.

AD-TO-EARN

4. The Ads Page

A dedicated Ads tab hosts 4–8 sponsored ad slots at a time, each tied to a specific advertiser or ad network. Watching an ad through to completion earns points immediately.

Rule	Detail
Points per ad	50 points
Ad slots	4–8 company/network slots, rotated by the admin panel
Per-company stats	A progress bar below the slots shows how many times each company's ad has been watched
Ad networks	Multiple rewarded-video networks built for Telegram's in-app WebView

Per-slot daily view limits are configurable from the admin panel and may vary by advertiser and network.

ENGAGEMENT

5. Task System

Directly below the check-in box on the Home page sits the task list. Tasks are simple, visit-style actions the admin team can add or remove from the admin panel at any time.

Rule	Detail
Points per task	50 points
Currently live tasks	Subscribe to the Telegram channel, visit the website, view the whitepaper

Rule	Detail
Daily progress	Shown as a running counter (e.g. 0/20) across that day's available task slots
Reset	00:00 UTC (6:00 AM Bangladesh time), daily
Management	New tasks are added and removed by the admin from the admin panel

POINTS SYSTEM

6. How Points Add Up

Points come from four channels, all tied permanently to a user's Telegram ID rather than a device or session:

Daily check-in	10–40+ points, streak-based
Ads	50 points per ad watched
Tasks	50 points per completed task
Referrals	Fixed bonus + 10% ongoing commission (Section 7)

Because progress is tied to a Telegram ID, it's preserved even if a user leaves and rejoins the bot later.

GROWTH

7. Referral Program

Referrals reward sustained engagement, not just sign-ups. The eligibility threshold has been raised in this version to better reflect genuine, lasting activity.

Condition	Detail
Eligibility	Referred user watches 25 ads (raised from 10)
Fixed bonus	25 points, credited once the referral becomes eligible
Ongoing commission	10% of the referred user's ad points, for as long as they stay active

What the Referral page shows

- Each referred user's name, with an "X / 25 ads watched" progress line underneath.
- A Pending or Eligible status badge for each referral.
- A colour-coded progress bar beneath the badge — shifting from deep red, through orange, to deep green as the referred user approaches 25 watched ads.
- A commission box in the middle of each entry, showing total commission earned from that specific referred user (separate from the one-time 25-point bonus).

- Below the referral link: a summary bar totalling Referred, Eligible, and Points Earned across the whole referral network.

COMMUNITY

8. Leaderboard

A dedicated Leaderboard tab ranks the top 100 users by total points, refreshed live as points are earned.

- The top 3 users appear on a podium, each avatar topped with a crown — gold for 1st, silver for 2nd, bronze for 3rd — alongside an up/down indicator showing recent rank movement.
- Ranks 4 through 100 are listed below in order, with points shown alongside each entry.
- If a user's rank falls outside the top 100, their own rank, name, and points still appear in a separate box beneath the list — so no one is simply left off the page.

ACCOUNT

9. Profile & Stats

The Profile avatar defaults to the user's Telegram profile picture. Users can override this: uploading a custom picture and setting a custom display name directly from the app.

The stats section offers three views — last 7 days, last 30 days, and all-time — and every ad watched, task completed, or check-in claimed is reflected the moment it happens (see Section 11, Live Data Sync).

IN-APP

10. The LFA Page

A tab labelled LFA, positioned directly before Profile in the navigation, opens this same public website inside the Telegram Mini App — giving users a way to read the latest whitepaper, mechanics, and roadmap without leaving the bot.

TECHNICAL

11. Live Data Sync

All tabs — Home, Ads, Leaderboard, Referral, LFA, and Profile — stay in sync as a user moves between them. Watching an ad on the Ads tab, for example, is reflected on the Profile tab immediately, with no manual refresh or app restart required.

PAYOUTS

12. Season System

The project operates on a seasonal cycle to structure revenue pooling and give the community predictable milestones. Pool calculation is performed once every two months, covering the full season's accumulated ad revenue and user points together.

Period	Phase
September – October	Testing Season

Period	Phase
November – December	Season 0
January onward	Season 1, and subsequent seasons

PAYOUTS

13. Withdrawal & Payout

The withdrawal form is always visible on the Profile page, but it stays inactive by default — users cannot submit a wallet address until the admin team switches it on.

- **Toggle:** withdrawals are switched on or off per season from the admin panel.
- **Window:** opens shortly after a season ends — typically the 1st–2nd of the following month — with the exact dates set per season by the admin.
- **Review:** submitted requests are manually reviewed and approved, typically the 3rd–5th.
- **Payout method:** USDT, sent manually via BEP20 or Polygon, to the wallet address submitted at withdrawal time.

In-app message

“[Season name] payout window opens once this season ends. Exact dates are set by the team and shown here when withdrawals are active.” The season name and dates shown in-app are configured live from the admin panel, so this message always reflects the current season.

No fixed conversion rate

Payout amount is determined by that season's allocation calculation — not a pre-set point-to-dollar ratio.

INTEGRITY

14. Anti-Fraud & Integrity Measures

- **Persistent identity tracking:** progress is tied permanently to a user's Telegram ID.
- **Referral eligibility threshold:** a referred account must reach 25 watched ads before it counts.
- **Streak-break penalty:** missing a check-in day resets the streak to its base value, discouraging bursty, farmed activity in favour of steady engagement.
- **Admin-controlled toggles:** tasks, ad slots, and withdrawals are all switched on/off centrally, giving the team a fast way to respond to abuse.
- **Manual withdrawal approval:** all payouts are reviewed by the admin before funds are sent.
- **Full admin visibility:** the admin panel provides a complete view of every user's points and referral tree.

FUTURE OUTLOOK

15. The LFA Token

Live For Ads is designed to grow beyond a points-and-payout system. As the community and ad revenue scale, the project intends to explore launching its own token, LFA, on-chain.

The long-term idea is straightforward: the same engagement that earns points today — checking in daily, watching ads, completing tasks, referring friends — becomes the foundation for a token economy tomorrow. Early, active community members would be positioned to benefit most from this transition, since points and season activity are being tracked from day one.

Not a current commitment

This is a forward-looking direction, not a current commitment. No token exists yet, no launch date is set, and nothing here should be treated as a promise of value. If and when a token launch becomes viable, full details — supply, distribution, utility, and timeline — will be published in a dedicated update to this whitepaper.

WHAT'S NEXT

16. Roadmap

- Sep – Oct: Testing Season — check-in streaks, Ads tab, tasks, and Leaderboard live for feedback and bug fixes.
- Nov – Dec: Season 0 — first live season, first pool distribution.
- Jan onward: Season 1 — full public rollout, community growth push.
- Future: additional ad network integrations, an expanded task catalogue, and exploration of the LFA token launch pending community growth.

LEGAL

17. Disclaimer

This document describes the intended design and mechanics of the project as of its current development stage. Features, point values, ratios, timelines, and the potential LFA token described above may be adjusted — including via live admin panel configuration — as the project develops. This is not a guarantee of returns; payouts depend entirely on actual advertising revenue generated and community size. Nothing in this document constitutes financial or investment advice.
